

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended) A method for determining the level of ~~an analyte~~ glucose in the blood of an individual comprising:

- (i) obtaining a sample of hair or urine from said individual, said sample being a non-blood sample but containing blood components;
- (ii) determining the volume of blood in the obtained sample by measuring the level of a blood component in said samples;
- (iii) determining the amount of ~~said analyte~~ glucose in the sample or in the blood cells present in said non-blood sample; and
- (iv) calculating the level of ~~said analyte~~ glucose in the blood of the tested individual based on the measurements in (iii) and (iv).

Claim 2 (original) The method of Claim 1,

wherein said blood component is hemoglobin.

Claim 3 (canceled)

Claim 4 (currently amended) A method according to Claim 1, wherein said non-blood sample is a sample of hair obtained from said individual, the method comprising:

- (i) obtaining a sample of hair from said individual;
- (ii) determining the amount of blood or interstitial fluid in said obtained sample and if necessary, correcting variations between different hair samples;
- (iii) determining the level or concentration of ~~said analyte~~ glucose in said blood or interstitial fluid and
- (iv) calculating the level of ~~said analyte~~ glucose in the blood of the tested individual based on the measurements in (ii) and (iii).

Claim 5 (original) A method according to claim

4 wherein before stage (ii) said blood or interstitial fluid are first extracted from the hair follicle of said obtained hair.

Claim 6 (currently amended) A kit for determining the level of ~~an analyte~~ glucose in the blood of a tested individual comprising:

- (i) means for obtaining a sample of hair or urine from said individual, said sample being a non-blood sample but containing blood components;
- (ii) means for measuring the level of a blood component in the sample;
- (iii) means for measuring the level of ~~the~~ tested analyte glucose in the obtained sample;
- (iv) means for calculating the level of ~~the~~ tested analyte glucose in the blood of the tested individual on the bases of the measurements obtained in (ii) and (iii) above.

Claim 7 (original) A kit according to Claim 6, further comprising means for separating said red blood cells from the sample.

Claim 8 (previously presented) A kit according to Claim 6, further comprising means for lysing said red blood cells.

Claim 9 (currently amended) A kit according to claim 6, further comprising a test strip incorporating reagents or structures necessary to carry out the measurement of the ~~tested analyte~~ glucose and blood component and a instrument into which the test strip can be inserted into or to which the test strip may be connected; said instrument being an instrument that detects and analyzes and optionally ~~translating~~ translates said signals into ~~prevalent~~ relevant units.

Claim 10 (currently amended) A kit according to Claim 6, wherein the obtained body sample is a hair sample, said kit comprising the following:

- (i) hair removal means;
- (ii) a suitable diluent in which the blood or interstitial fluid from the obtained hair is collected;
- (iii) means for the determination of the level of a blood component in the blood or interstitial fluid specimen;

(iv) means for determination of the level of said analyte glucose in the blood or interstitial fluid specimen; and

(v) means for calculating the level of the tested analyte glucose in the blood of the tested individual on the basis of the measurements obtained in (iii) and (iv) above.

/ Claim 11 (canceled)

Claim 12 (original) A kit according to Claim 11_6, further comprising a metabolic inhibitor capable of preventing glucose utilization by living cells present in said sample.
